About this calendar

This calendar is built from a single source — Book II of Heinrich Cornelius Agrippa's *Three Books of Occult Philosophy* (*De occulta philosophia*, Cologne, 1533): chapter 33 on the twenty-eight mansions of the Moon and chapter 34 on the planetary hours. The text is taken from our own translation in the notebook *Observations of the Heavens* (series "Agrippa · The Occult Philosophy", Book II, notebook 5). We have added nothing of our own: the name and the effect of every mansion are Agrippa's words, and "in plain words" only retells what he says.

> IN AGRIPPA'S WORDS
>
> Seeing that **the Moon measureth the whole zodiac in the space of twenty-eight days**, hence it is that the wise men of the Indians and the most ancient astrologers have granted unto the Moon twenty-eight mansions, which are in the eighth sphere of the fixed stars. And from the divers stars contained in them they obtain divers properties and names, whilst the Moon passeth through them.
>
> Each of these mansions, according to the opinion of Abraham, containeth **twelve degrees, fifty-one minutes and almost twenty-six seconds.**
>
> The first seven begin in Aries, the next seven in Cancer, then seven in Libra, and the last seven in Capricorn — **so that in every quarter of the heaven there are seven mansions.**

☾

How to read the calendar

How it was calculated

Agrippa writes that each mansion is 12° 51′ 26″ — exactly 360° divided by 28 — and that the count begins at the start of Aries. So we calculate the mansions in exactly that way: from the Moon's apparent ecliptic longitude (vernal point, equinox of date) — mansion 1 is 0°–12° 51′ Aries, mansion 2 runs to 25° 43′ Aries, and so on to mansion 28 at the end of Pisces.

The Moon's position was computed with the method of chapter 47 of Jean Meeus, *Astronomical Algorithms* (2nd ed., 1998), the Sun with chapter 25; the moments when the Moon enters the next mansion and when a phase falls were found to the minute. The result was checked against independent ephemerides: NASA JPL Horizons (the Moon's longitude on six dates in 2027 agrees within 0.002°, i.e. 8″, so the time of a mansion change is off by less than a minute) and the U.S. Naval Observatory (USNO) table of lunar phases (every phase of 2027 agrees to the minute).

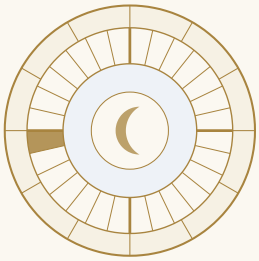

All times are in Universal Time (UTC). To convert, add your zone offset — for example London +0 (+1 from 28 March to 31 October), Berlin +1 (+2), New York −5 (−4 from 14 March to 7 November), Los Angeles −8 (−7), Sydney +11 (+10 from 4 April to 3 October).

One note from the historical note in our Observations of the Heavens: because of precession, the vernal point has moved against the stars by almost a whole sign since antiquity, about 30°. So Agrippa's equal mansions no longer coincide with the stars whose names they bear; the third mansion, "the Pleiades", covers 26° Aries to 9° Taurus, while the Pleiades themselves now lie near the border of Taurus and Gemini. The calendar follows Agrippa's rule, not the stars.

1

MANSION 1

Alnath

WHAT IT IS	the horns of Aries
IN THE ZODIAC	Aries 0° 00′ – Aries 12° 51′

IN AGRIPPA'S WORDS

For journeys and for discord.

IN PLAIN WORDS

The first mansion opens the zodiac at the horns of Aries. Agrippa assigns it to two opposite purposes — setting out on a journey and sowing discord. In the old reading it is a moment of movement and collision.

THE MOON IN THIS MANSION IN 2027

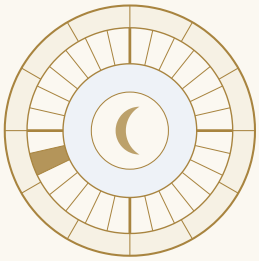

When the Moon enters the mansion and when it leaves it (UTC).

1. **13 Jan** 21:14 – **14 Jan** 21:27
2. **10 Feb** 02:49 – **11 Feb** 03:06
3. **9 Mar** 09:03 – **10 Mar** 08:59
4. **5 Apr** 16:48 – **6 Apr** 16:26

11. **13 Oct** 20:10 – **14 Oct** 20:41
12. **10 Nov** 04:38 – **11 Nov** 05:12
13. **7 Dec** 13:31 – **8 Dec** 14:26

MANSION 2

2 Allothaim

or Albochan

WHAT IT IS	the belly of Aries
IN THE ZODIAC	Aries 12° 51′ – Aries 25° 43′

IN AGRIPPA'S WORDS

For the finding of treasures and the retaining of captives.

IN PLAIN WORDS

A mansion that "holds and finds". Agrippa links it with the finding of hidden treasure and with keeping captives where they are. Its name comes from the stars of the belly of Aries.

THE MOON IN THIS MANSION IN 2027

When the Moon enters the mansion and when it leaves it (UTC).

Appendix: the planetary hours

IN AGRIPPA'S WORDS

For almost all astrologers divide the whole space of time from the rising of the Sun unto its setting into twelve equal parts, which they call **the twelve hours of the day**; and afterwards the time from the setting unto the rising they likewise divide into twelve equal parts, which they call **the twelve hours of the night**. And then they distribute those several hours among the several planets according to the order of their succession, **always giving the first hour of the day unto the lord of that very day**, and afterwards unto the rest in order, unto the end of the four and twenty hours.

IN PLAIN WORDS

The time from sunrise to sunset is divided into twelve parts, and the time from sunset to sunrise into twelve again. So a daytime hour is long in summer and short in winter. The hours are given to the planets in turn in the **Chaldean order** — Saturn, Jupiter, Mars, Sun, Venus, Mercury, Moon — and the first hour of the day belongs to the lord of the day.

The order of the planetary hours

Day	Hours of the day (from sunrise)												Hours of the night (from sunset)
